### Superior sound.

We built our reputation designing great-sounding analog circuits for critical studio recording environments, and we put all of that experience into designing StudioLive Series III S. In 1995, PreSonus patented digital control over analog circuits with our first studio product. Building on this legacy, we created a separate digital volume-control circuit ahead of our lauded analog XMAX mic preamp design, providing the convenience of digital recall without sacrificing fidelity. This allows the StudioLive mic preamps to be remote-controlled with UC Surface software or Studio One, and when you load a StudioLive mixer scene, the mic preamp trim values can be recalled along with the other settings.

# Extensive connections for flexible signal flow.

The back panels of StudioLive Series III S consoles sport all of the connections you need for live sound and studio production. With flexible connectivity, superior audio quality, the ability to customize for your workflow, and powerful processing, mixing, and routing capabilities, you'll create your mixes in whatever manner works best for you. We just provide the tools.

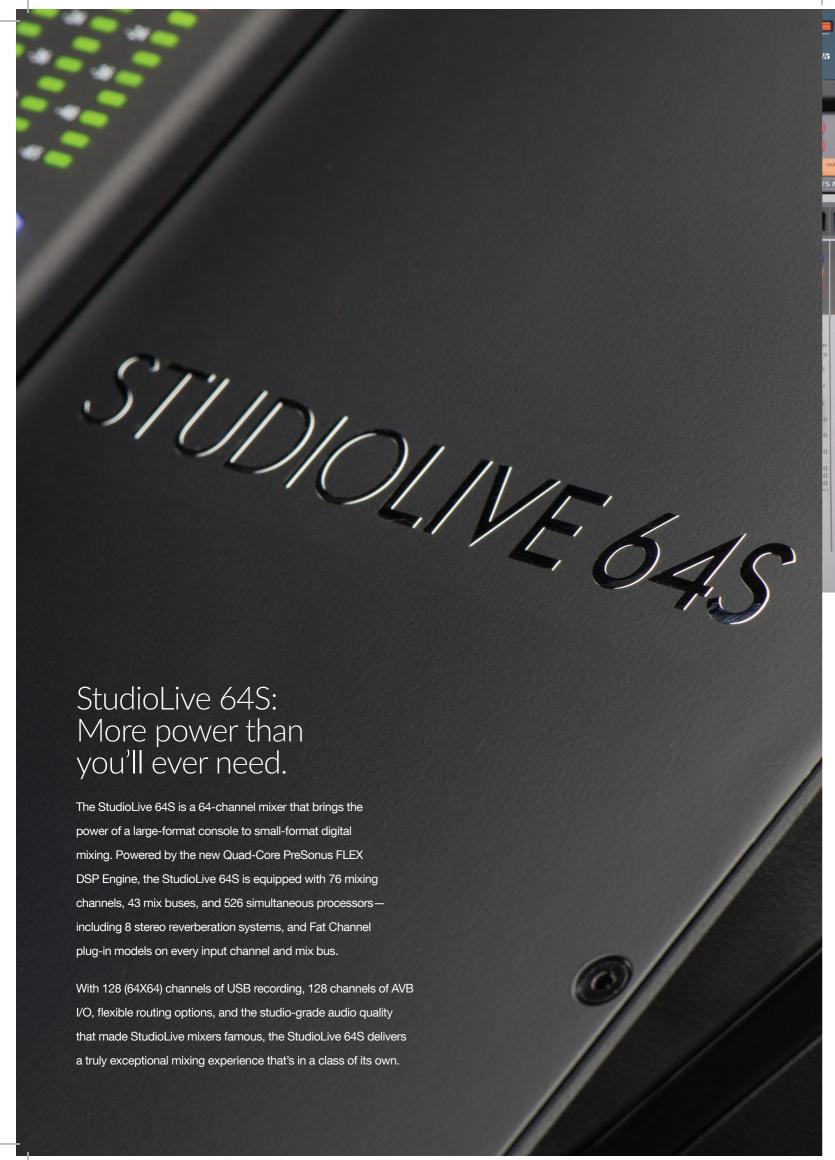

## STUDIOLIVE SERIES III S

Digital mixers with AVB networking and PreSonus FLEX DSP Engine

# Fat Channel plug-ins bring your mix to life.

Every Fat Channel plug-in has been created using State Space Models of the individual components of the original hardware so they sound and behave just like the analog units. The ten included vintage EQ and classic compressor Fat Channel plug-in models can be used onboard your mixer, available on every input channel and output bus, as well as within Studio One.

And when you're ready for more options, PreSonus offers four Fat Channel plug-in collections with 15 additional models from which to choose, giving you a host of new signal processing options.

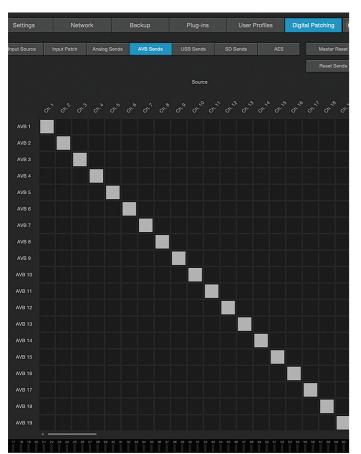

Fat Channel plug-ins can be inserted on every input channel and output bus. Now you can enjoy extensive, studio-style processing whether recording in the studio or running shows on the road.

## The ultimate USB audio interface and control surface.

With 128 (64x64) channels of recording over USB, the StudioLive Series III S is not just the best digital mixer for live sound recording; it's the best for the studio as well. Each channel can independently access its analog input or its dedicated digital return from your computer. While compatible with any DAW, Studio One and StudioLive are the perfect pair to elevate your recording environment. Remotely control your StudioLive's recallable XMAX mic preamps and Fat Channel processing from Studio One Artist. Press the DAW button and use the touch-sensitive motorized faders to control your Studio One mix as well as MCU and HUI DAW control modes for third party DAWs. Seamless integration and thoughtful bidirectional control with Studio One make StudioLive the best mixing consoles for the modern recording studio.

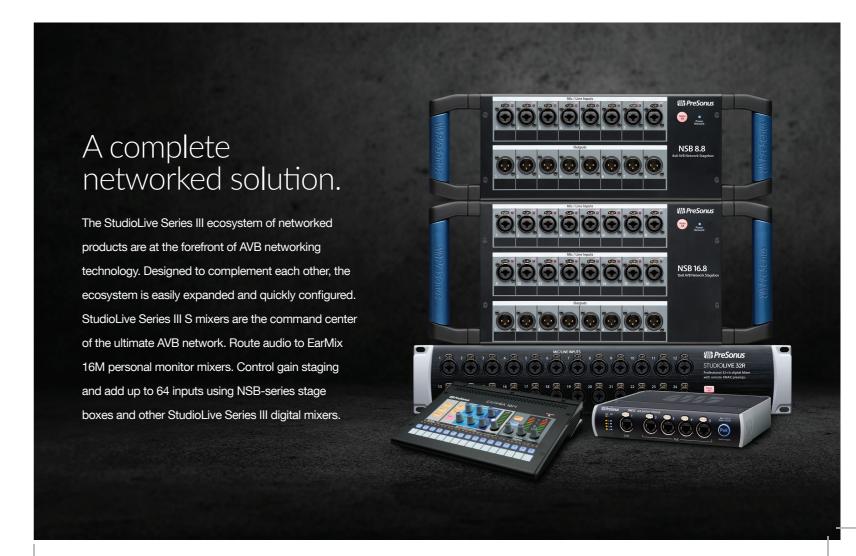

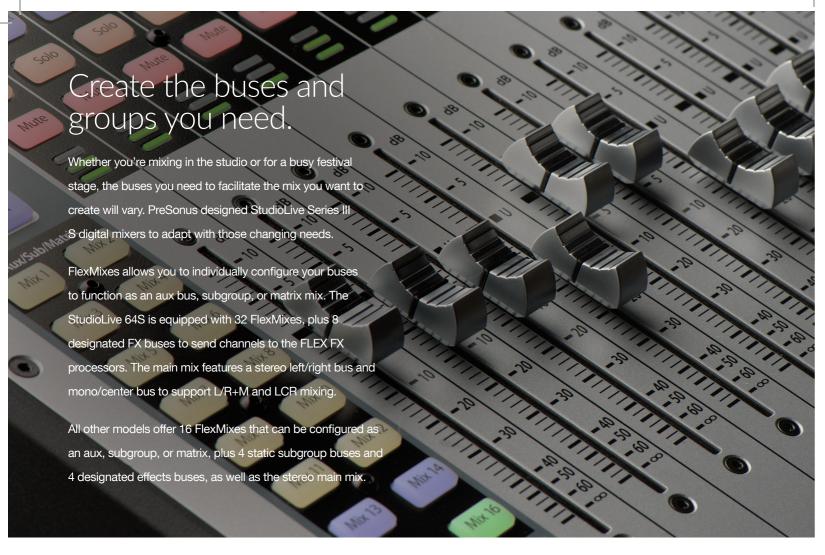

## Reconfigure your mix without unplugging a cable.

StudioLive Series III S digital mixers incorporate the concept of an analog patch bay and digitize it. This lets you patch any analog input or digital return (AVB, USB, or SD Card) to any channel to customize your mix configuration. This flexible feature also allows you to freely route audio to your AVB network and record any of the inputs and FlexMixes on the 64 USB sends. Digital Patching also makes it easy to quickly route to and source from your AVB audio network when using the StudioLive as part of a complete networked audio system.

# Find the right mixer for the job.

### StudioLive 64S:

- Twice the DSP of previous Series III mixers
- 76 mixing channels and 43 buses
- 33 touch-sensitive motorized faders
- 526 simultaneous effects

#### StudioLive 32S:

- 40 mixing channels, 26 buses
- 32 recallable XMAX preamps
- 33 touch-sensitive motorized faders
- Compact frame

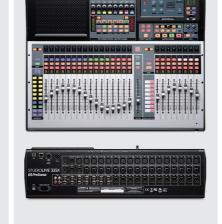

#### StudioLive 32SX:

- 40 mixing channels, 26 buses
- 32 recallable XMAX preamps
- 25 touch-sensitive motorized faders
- Low-profile, space-saving frame

### StudioLive 32SC:

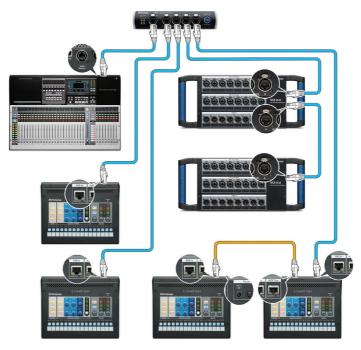

- 40 mixing channels, 26 buses
- 16 recallable XMAX preamps
- 17 touch-sensitive motorized faders
- Rack-mountable, road-ready frame

## Unmatched scalability, thanks to AVB.

StudioLive Series III S digital mixers and the StudioLive Series III ecosystem of AVB networking products allow you to create a system that is truly customized for your needs. Connect NSB-series stage boxes to add remote analog inputs and outputs wherever they're required. Add EarMix 16M personal monitor mixers to give your musicians their own customizable 16-channel monitor mix. Multiple StudioLive Series III digital mixers can be networked together, allowing you to route audio to and from any device on the audio network thanks to the flexibility of Digital Patching—available both onboard your Series III digital mixer and inside UC Surface remote mixer software.
