

Also available: The ATOM Producer Lab.

The ATOM Producer Lab includes ATOM and Studio One, and adds the AudioBox USB 96 audio/MIDI interface and the M7 large-diaphragm condenser microphone into a single production powerhouse bundle. With added loop and sample content from MVP Loops and world-class effects and plug-ins via the Studio Magic Plug-in Suite, burgeoning producers can get everything they need to make beats and track vocals in a single purchase. It even includes all the cables you need to hook it all up.

Everything you need.

You'll love ATOM's expressive pads and flexible controls. Its tight integration with Studio One will open up your production environment and speed up your workflow, and you get a wealth of virtual instruments, loops, and drum kits with Studio One to fuel your creativity. But we wanted to give you more, so we worked with MVP Loops to deliver a carefully curated loop and one-shot library custom-designed for ATOM. Still not enough? You can buy even more content from the PreSonus Shop. Check out ATOM and Studio One at your favorite PreSonus dealer today!

ATOM
Production and Performance Pad Controller

Music is our life.
PreSonus is our day job.

PreSonus

PreSonus

Fast, flexible, and feature-packed.

Produce beats, play virtual instruments, and trigger sound effects and loops with unsurpassed expressiveness and flexibility! Both a compact, dynamic performance controller and a tightly integrated production environment, PreSonus® ATOM™ pad controller and included Studio One® Artist production software let you create and perform with ease. The most versatile pad controller in its class, ATOM is compatible with most music software and lets you perform and produce with virtual instruments and trigger samples and loops in real-time, using 16 full-size, velocity- and pressure-sensitive RGB pads and 8 assignable pad banks.

You're in control.

ATOM puts you in control of your music production software. Trigger loops and effects and play virtual instruments with 16 full-size, velocity- and pressure-sensitive RGB pads. Eight assignable pad banks let you, for example, assign your entire virtual drum rack to each pad within each bank. MIDI Keyboard mode, Note Repeat mode, and Full Velocity mode enable you to custom control your instruments. And with 4 programmable rotary encoders and 20 assignable buttons, you can navigate and set more parameters faster.

Produce quickly and easily in a tightly integrated environment.

ATOM connects to your computer via USB and is compatible with most music production and performance software but it is absolutely amazing when used with PreSonus Studio One. ATOM and Studio One integrate tightly so you can create quickly and easily. Enjoy blazingly fast, professional-style workflow with ATOM's navigation, editing, and loop-point-creation features and transport controls.

Bring ATOM out to play for a stunning live show.

Sure, ATOM is a great production pad controller but it's an instrument controller too. Use the velocity- and pressure-sensitive pads to play your virtual instruments live, with incredible expressiveness. Set up pad banks for a full virtual drum set and perform beats that will energize any crowd. Even play multiple ATOMs at once to put on an exciting live show.
